

Solve complex data-integration challenges with a cloud native integration platform

The Intelligent Data Exchange

IDX

Integration is vital to unlocking the true commercial value of your data. But for many enterprises today, time-consuming manual integration processes stand in the way. To solve these challenges, Graz has created the Intelligent Data Exchange (IDX). An automated, multi-integration hub, IDX enables many-to-many connections with hundreds or even thousands of data endpoints. A turnkey solution based on pre-built integration patterns, IDX enables businesses to rapidly and cost-efficiently interface with practically any combination of ERP, financial management, and custom-built systems.

Hosted in the SAP Business Technology Platform and delivered as a fully managed service by Graz, IDX lets even the most complex data integration tasks fade into the background. The result? Your business can accelerate digitisation, embrace automation and extract greater value from your data.

ISO 20022

Rapid deployment, minimal risk

Your organisation depends on timely access to data to drive mission-critical business processes. Any kind of disruption to your day-to-day operations is simply not an option. Because IDX is designed to seamlessly integrate with the SAP Business Technology Platform, the solution can be deployed rapidly, with zero impact on business users. In addition, IDX implementations require significantly less manual effort and fewer human resources than equivalent on-premises development projects—helping you to minimise cost and risk simultaneously.

Built-in security and compliance

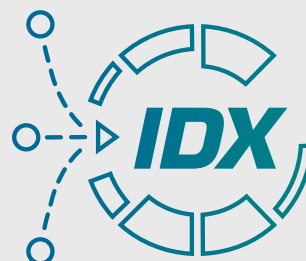

Today, many businesses depend on error-prone, human-driven data integration processes to support mission-critical workflows such as reporting and compliance activities. IDX is designed to satisfy the world's most demanding standards for information security and regulatory compliance – enabling you to automate these vital processes with the peace of mind that every transaction is fully transparent and traceable.

Capture every data source

Whether your organisation runs on SAP or an ERP platform from another leading vendor, IDX can help you interface with all your data endpoints. With pre-built, many-to-many data integration templates for all the world's leading ERP systems, you can avoid complicated, time-consuming development work and start experiencing the benefits of automated data integration quickly. And thanks to its unique, modular integration logic, IDX even makes it fast and straightforward to interface with custom tools running on legacy platforms.

The key benefits of IDX

- Support data integration at enterprise scale: from 10 to more than 10,000 data endpoints
- Ensure security and compliance with a full audit trail for every transaction
- Scale rapidly and cost-effectively as your data volumes grow using the world-class SAP Business Technology Platform
- Achieve shorter time-to-value with less business risk compared to in-house data integration projects

About Graz

Graz Sweden AB creates solutions that address the unique needs of the financial services industry and other larger enterprises. Leading financial services organizations across the Nordics trust Graz to deliver software solutions to support their mission-critical integration, reporting and analytical processes.
